

Recycling of Aluminium from End of Life Vehicles

The aluminium content in cars grows every year thanks to **its properties** that make it appealing for car manufacturers:

Lightweight

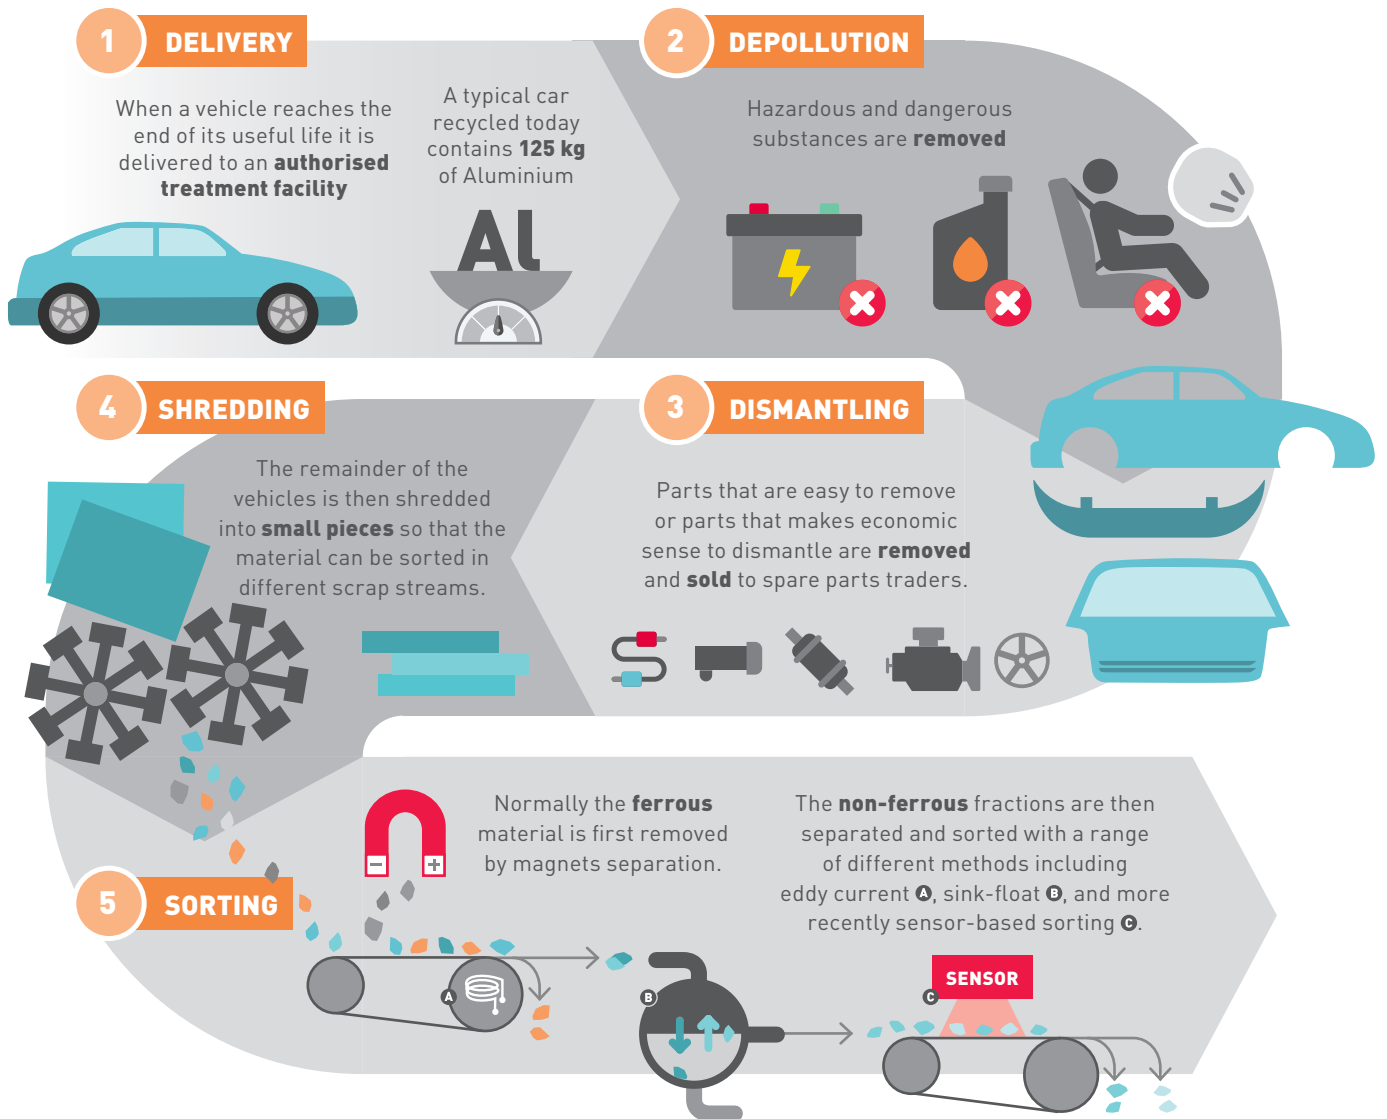

Safe

Fully and repeatedly
recyclable

Aluminium recovery today

Key facts

In today's modern plants **95%** of the aluminium in an End of Life Vehicle is successfully and profitably **reused or recycled** into new aluminium products **substituting** primary aluminium.

Making a vehicle lighter and recyclable are **compatible goals**. Using aluminium will contribute to making the vehicle more efficient through **lightweighting** and to ensure high **recycling rates** at the end of life.

The recycling of aluminium allows to **reduce** the **energy consumption** by **95%** compared to the production of primary aluminium, thus representing a clear **environmental benefit**.
